

# ***HTML study / day 1***

To start making a website, we will always use the same text as e e

`<!DOCTYPE html>`

```
<!DOCTYPE html>
```

and then we use the

Important Info

tag always starts and ends with <>

example:

```
<html lang="en">
```

Soon after we will move on to the structure of the site, using the

```
<head> (head)
```

## ***Example of how to use:***

In the case of the image we use `<head>` it to start, then what will be in the head of the code/site and at the end `</head>` , whenever we do something like this we have to start like this:

### example

```
<footer  
  <p>&copy; 2025 Your Name. All rights reserved  
</footer
```

In the code given by me we see 2 examples of what I was talking about.

inicio: `<footer`

fin: `</footer`

inicio: `<footer`

fin: `</footer`

### Order:

Of all the codes I've seen so far in the schedule they had the following order.

`<head`

`</head`

e

It seems little because we haven't seen what's inside the body yet

Examples:

```
<body>
```

```
<div class="container">
```

```
<header>
```

```
<h1>INFO</h1>
```

```
<p> INFO!</p>
```

```
</header>
```

```
<main>
```

```
<a href=" INFO " class="link" target="_blank">
```

```
<div class="link-item">
```

```
<h2> INFO </h2>
```

```
</div>
```

```
</a>
```

```
<a href="h INFO " class="link" target="_blank">
```

```
<div class="link-item">
```

```
<h2> INFO </h2>
```

```
</div>
```

```
</a>
```

```
<a href="h INFO " class="link" target="_blank">
```

```
<div class="link-item">
```

```
<h2> INFO </h2>
```

```
</div>
```

```
</a>
```

```
<a href="h INFO " class="link" target="_blank">
  <div class="link-item">
    <h2> INFO </h2>
  </div>
</a>
<a href=" INFO " class="link" target="_blank">
  <div class="link-item">
    <h2> INFO </h2>
  </div>
</a>
</main>

<footer>
  <p>&copy; 2025 INFO. All rights reserved.</p>
</footer>

</div>
</body>
```

Some things are marked in the color code to notice that it is not as small as we thought, deep down this is what I learned in the last few days I will study a little more HTML and I will learn about CSS to do the UI part of the sites.
